Assignment 2

You are designing a learning app for kids. Pick at least 3 of your favourite pieces of fruit, and show a list of them on the main page. When each fruit name is clicked, a new page opens up that has a photo/picture of the fruit and its name.

- Design 2 different layouts for your app, so it works on a typical phone, and a tablet. Also, use different picture sizes for drawables.
- Localize your programme into both English and Mandarin/simplified chinese.

Additional:

- Substitute the initial list of fruit names with their clickable pictures
- Add a big capital letter (first letter of the word that fruit name starts with) for the fruit along with its name on the fruit pages
- Make the app as attractive as possible for kids (use bright colours and big font)
- Use Listview or Recyclerview to help generate your list.

Screen Sizes for the emulators

You can either specify screen size and dpi manually or choose from the typical device list.

Submit your project as a single .zip or .tgz file and remember you will demo the app to a demonstrator after the assignment deadline has passed .

You must record a short 1-2 minute tour of your app & code to add the grading.
