Instructions for Recording the Video

Assignment - 2

1. **Introduction**
   Give complete details of your app. You must highlight all required functionality of the app through a tour.

2. **App Tour**

   - **Main Screen**. Show the main screen of your app, where the list of fruits (or their pictures, if you used images) is displayed. Demonstrate clicking on a fruit to show that it navigates to the corresponding page.
   - **Fruit Detail Page**. On the fruit detail page, showcase the fruit's picture, name, and the big capital letter for the fruit. If your app has features to make it interesting for kids, highlight them.
   - **Different Layouts**. Demonstrate the layout on both a phone and a tablet emulator. Show that the layouts adapt to different screen sizes and that the picture sizes for the fruit adjust accordingly.
   - **Localization**. Switch between English and Mandarin languages in the app to show localization in both languages. Briefly display both language versions of the main screen and a fruit detail page.

3. **Optional Features**
   If you implemented the additional features (like clickable pictures instead of names or button-based language selection etc), highlight them.

4. **Video Tips**

   - **Speed Up**. You can speed up non-essential parts of the video (e.g., navigating between pages) to fit within the 1-minute limit.
   - **Narration/Captions**. Add voiceover or captions to explain what you're showing as you navigate through the app.

5. **Video Format**
   Submit the video in MP4 (preferred) or MOV format. Make sure your video is concise, clearly showing all the required functionality and fulfilling the assignment criteria.
